## Key Features

" Knowledge is key; using it is even better"

GOTRACK™  location information made simple.

# Multi Device Live Tracking

GOTRACK's multi-device solution offers a range of GPS tracking and fleet management solutions including in-vehicle options with a choice of GSM or GSM / Iridium hybrid through to mobile phone based software .

GOTRACK My Fleet™

The GOTRACK My Fleet™ and GOTRACK My Fleet Global™ devices are installed in the vehicle and send data to the GOTRACK M Zone portal to any PC or MAC via the internet. Vehicle activity is updated in real time to show where vehicles are and what they are doing. We have a choice of monitoring plans to suit every budget.

GOTRACK My Mobile™

Our mobile based software can be used on a wide range of GPS enabled handsets. Location updates can be set as low as every 60 seconds.

# Key Features

## Web Based Browser

GOTRACK's advanced system uses the latest Microsoft Silverlight software to bring feature rich, vibrant images on any PC or MAC with an internet connection. Silverlight mobile is expected to launch shortly which will give access to phone based browsers, including iPhones.

## Real Time Turn By Turn Tracking

GOTRACK My Fleet™ has the ability to deliver an unrivalled level of detail. Whilst it is true that many companies offer "live" or "real time" tracking, it is only as real time as the data you see on your system. In most cases, this is every FIVE MINUTES – hardly real time.

For customers that want a true real time system GOTRACK My Fleet TBT™ provides an update each time the vehicle changes direction or an event such as speeding takes place. This is in addition to a 3 minute timed update. This gives our customers a true view of vehicle activity in real time.

# Key Features

## Geofences, Customer Sites and Points of Interest

It's great to be able to know where your vehicles or mobile phones are located . It's fantastic that you can see what street they are located on. But unless you know all of your customers and regular locations, including and points of interest such as competitors, garages, home addresses and more, much of this information becomes limited.

GOTRACK™ can electronically tag any of these locations giving each a name and grouping them by type. A location can be any size or shape you wish, it can even be a section of road or any other corridor. Once tagged, any activity within a location will provide the location name, not just a street name.

Using our reporting suite, detailed information about each location can be seen including:

- Date and time of each visit.
- Average time per site.
- Number of site visits by vehicle.
- Vehicle events per site.
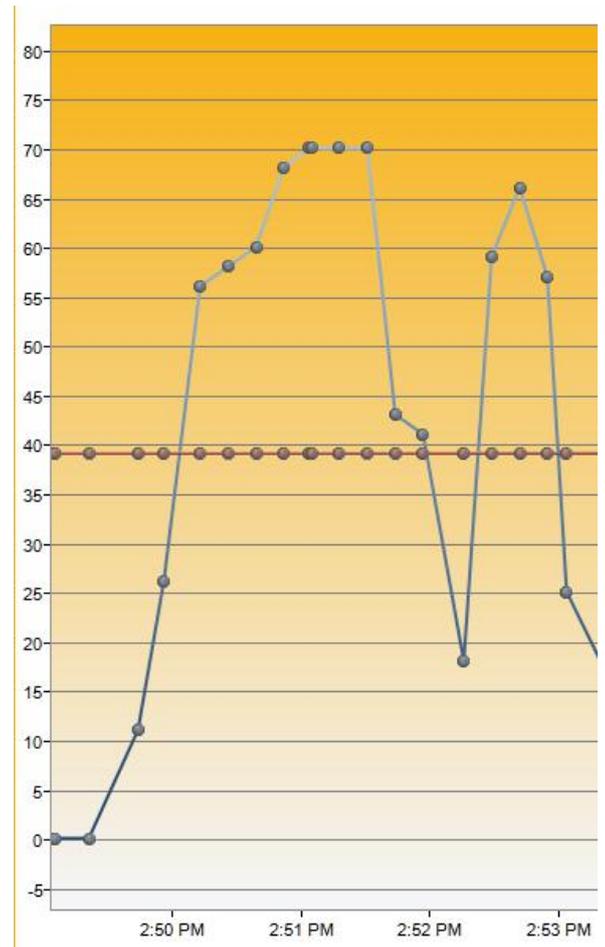

# Key Features

## Monitor Speed

Monitoring speed levels can help your business drastically reduce fuel usage, vehicle wear and tear and more importantly reduce the risk of accidents.

GOTRACK delivers this information in an easy to see format, including timeline chart and location update list.

An alert can also be sent in the event a vehicle exceeds a pre-determined level.

Speed Monitoring

Timeline Chart

| | | | | |
|---|---|---|---|---|
| (T) | Tachograph Data | 1.7km S of Waikiki - 129 Currie St, Rockingham, Western Australia, AUSTRALIA | 2010-01-27 14:51:05 | 70.00 |
| (T) | Tachograph Data | 0.5km S of Gull - 75 Currie St, Rockingham, Western Australia, AUSTRALIA | 2010-01-27 14:51:18 | 70.00 |
| (T) | Tachograph Data | 0.3km S of Gull - 67 Currie St, Rockingham, Western Australia, AUSTRALIA | 2010-01-27 14:51:31 | 70.00 |
| (T) | Tachograph Data | 0.1km SW of Gull - Currie St, Rockingham, Waikiki, Western Australia, AUSTRALIA | 2010-01-27 14:51:44 | 43.00 |

# Key Features

## Fuel Management

Fuel use is a major cost component to almost every business. With increasing fuel prices, reducing this cost is a high priority. In addition to understanding vehicle activity and having detailed information about each trip, GOTRACK can monitor specific vehicle fuel usage, producing vital information including purchase points, average fuel use and fuel usage trends.

Understanding how and where fuel is being used will greatly assist in reducing your fuel cost.

## Record PTO Activities.

GOTRACK My Fleet™ has 5 digital inputs. When connected to a PTO such as a HIAB, information about when and where these are used are sent to the GOTRACK Mzone

## Reports

GOTRACK has a full reporting suite to provide information on your total fleet activity, including daily time sheets, trip information, customer information and more.
